

KIPP TOP

HOOF TRIMMING CRUSH FOR DAIRY AND BEEF CATTLE

Utilize the Kipp top either free-standing or as an integrated part of the gangway to use the space in an optimal way. With this new layout the animal can leave the stand towards ahead or laterally. The animals are safely fixed with wide belts. Thanks to the snap-devise you save time. Power-saving worm-gears or hydraulic belt tightening provide safe position.

Both for animal and treatment technician the stand is designed in an ergonomic way which can be used for dairy and beef cattle. The newly designed capturing devise allows also to work with horned animals. Animals enter the stand without any fear.
