

Vertical Rice Polishing Machine (Friction-Type)

FTV-60 (Friction-Type)

The brand-new vertical rice whitening machine system is now a reality under CSF's research and development program. By means of one vertical abrasive rice whitening machine in combination with two vertical friction rice whitening machines, the new 3-in-1 combination unit is a highly efficient, less costly, energy-saving, rice-whitening mechanism, replacing the accustomed devices of conventional horizontal and outdated vertical rice polishers. The new vertical rice whitening machine adopts the undated rice whitening method which employs the primary grain weight to maintain the proper pressure within the milling chamber taking merely one third in strength previously required for outlet weights. Consequently, each and every rice grain may receive an even and intact bran-removing process for high productivity, less broken rice, high quality of rice, space saving and low-cost installation.

Features

- **Even and Intact Rice-Whitening Process.**

Thanks to new science, a breakthrough from conventional process is made possible. In addition,

New design and structure promise faster change of consumable parts and better time-saving.

Specifications

Model	Required Power (hp)	Input Capacity (ton / hr)	Meas. (cft.)
FTV-60	60, 2, 2	4 ~ 6	161
